

Notes about the rig

`./5_bar_rig.qxw` is a template rig file for use with QLC+. It contains basic channel definitions as well as basic channel groups. It should **not** be modified directly and a copy should be created before a show's lighting is to be designed.

The rig template uses a custom fixture pattern for the Gear4music Cosmos 90s, `./Gear4music-Cosmos-90.qxf`, and it should be distributed to every new user of the template. **Failure to do this will result in a broken workspace file!** Please see [this documentation](#) to ensure you put the fixture pattern in the right place.

This fixture pattern only supports the basic RGBI (Red, Green, Blue, Intensity) input for the Cosmos 90s, the `mode` and `strobe` sliders are not assigned and will not be patched when adding the fixture to a workspace. As per the society's request, strobe lights are **not** permitted and this feature should **not** be added to the fixture pattern. Any modification of this fixture pattern should be authorized by the currently standing tech officer (checksums are provided at the bottom of this document)
